

## “innoclean” air purifier – Multi-function design

### Why “innoclean” air purifier is Multi-function?

Complied with different advance technology designed filtration process, e.g. Antimicrobial Filter, Nano-Silver Filter, Anti Dust Mate Filter, H13 Grade HEPA, Electrostatic Precipitator, Nano Photocatalytic Filter, UV Lamp, Active Carbon Filter and MnO<sub>2</sub> Catalytic Filter etc... innoclean can solve all common air pollutant problem of Indoor..

There are 4main type of air pollutant, including bacteria & virus; dust particles, harmful chemical gas and odor. All of the above 4main type of air pollutant can be solved by innoclean’s applied technology, different innoclean’s technology has been recognized and widely used in worldwide in different area and environment especially for indoor air quality improvement.

At the same time, all innoclean filtration process are designed in individual (Individual Type Filter), it make all filtration process become more efficiency and effectively.

#### For example:

Air Pollutant	Solved by innoclean filtration process
Bacteria & Virus	Antimicrobial Filter; Nano-Silver Filter; Nano Photocatalytic Filter and UV Lamp
Dust Particles	Electrostatic Filter; H13 HEPA and Electrostatic Precipitator
Harmful Chemical Gas	Nano Photocatalytic Filter, MnO <sub>2</sub> Catalytic Filter and Carbon Filter
Odor	Nano Photocatalytic Filter, MnO <sub>2</sub> Catalytic Filter and Carbon Filter
